WHO publications online

<http://www.who.int/publications/en/>

Key WHO publications

The World Health Report
Annual report with an expert assessment of global health including statistics. Focuses on a particular theme every year.

World Health Statistics
WHO's annual compilation of data from its 193 Member States.

International Travel and Health
Publication on health risks for international travellers, vaccination requirements and precautions to take.

International Health Regulations
Latest edition of the public health regulations that are legally binding on WHO Member States.

The International Classification of Diseases
The international standard diagnostic classification for epidemiological and health management purposes.

International Pharmacopoeia
Collection of quality specifications for pharmaceutical substances and dosage forms, for reference or adaptation by WHO Member States.

Journals

Bulletin of the World Health Organization
Monthly journal with peer-reviewed papers. Focus on developing countries.

 **Eastern Mediterranean Health Journal**
Published by the WHO Regional Office for the Eastern Mediterranean. Focus on policies and research in the region.

 **Pan American Journal of Public Health**
Published by the Pan American Health Organization (PAHO) in English, Portuguese and Spanish. Contains technical and analytical papers.

Weekly Epidemiological Record
Epidemiological information on cases and outbreaks of communicable diseases.

 **Western Pacific Surveillance and Response**
Published by the WHO Regional Office for the Western Pacific. Dedicated to the surveillance of and response to public health events.

WHO Drug Information
Quarterly journal on topics relating to medicines development and regulation.

Library & Information Networks for Knowledge

The WHO Library and Information Networks for Knowledge (LNK) provides comprehensive library and information services on WHO-produced recorded information in print and other media. In addition, library services give access to worldwide health, medical and development information resources to WHO headquarters, regions and country offices, ministries of health and other government offices, health workers in Member States, other UN and international agencies, diplomatic missions, and inter-governmental agencies. The WHO library programmes help regions and developing countries achieve self-sufficiency in providing information services to the health sector.

Library products and services

Reference librarians will provide orientation to the collections and information about how to use the library and its information resources.

The WHO library web site offers world-wide on-line access to WHOLIS the WHO library database which includes more than 70,000 bibliographic records and 30,000 links to full text documents.

WHOLIS is the first point of enquiry to find out about WHO documentation in general or on a particular subject. Workstations in the library give visitors access to the WHO web site, to WHOLIS, and to relevant health related and development internet resources.

WHOLIS & IRIS

WHOLIS is the World Health Organization's library database. WHOLIS indexes all WHO publications from 1948 onwards and articles from WHO-produced journals and technical documents from 1986 to the present. An on-site card catalogue, organized by subject headings, provides access to the pre-1985 technical documents.

Thousands of WHO publications and technical documents in digital format are already available online through WHOLIS. This number will increase as access to WHO materials in all available languages improves with the upcoming implementation of the Institutional Repository for Information Sharing (IRIS).

IRIS will provide WHO's information products in digital format from a single location (URL) with a multilingual interface. Its content will be freely accessible and searchable initially in the six official languages.

MEDLINE Database : <http://pubmed.gov>

- National Library of Medicine (USA)
- A bibliographic database containing more than
20 million references
- Indexes over 5500 biomedical journals; coverage is worldwide, but (86%) of the records are from English-language resources
- The scope of MEDLINE covers the fields of medicine, nursing, dentistry, veterinary medicine, the health-care system and the pre-clinical sciences as well as microbiology, delivery of health care, nutrition, pharmacology and environmental health
- New material is added and the database is updated weekly

#3 PubMed – Expert Source

The screenshot displays the PubMed website interface. At the top left is the NCBI logo. The PubMed logo is prominently displayed in the center, with the URL www.pubmed.gov below it. To the right, it states "A service of the U.S. National Library of Medicine and the National Institutes of Health". Below the logos is a navigation bar with tabs for "All Databases", "PubMed", "Nucleotide", "Protein", "Genome", "Structure", "OMIM", and "PMC". The search bar contains "PubMed" in the dropdown menu and "for" followed by an empty input field. A "Go" button is to the right. Below the search bar are buttons for "Limits", "Preview/Index", "History", "Clipboard", and "Details". The display settings section shows "Display" set to "AbstractPlus", "Show" set to "20", "Sort By" set to a dropdown, and "Send to" set to a dropdown. Below this, it shows "All: 1" and "Review: 0" with a refresh icon. The search results section shows a checkbox next to the entry "1: [Eur J Cancer Prev.](#) 2008 Apr;17(2):162-8." The title of the article, "Tobacco use in the European region.", is highlighted in a light blue box. The authors, "Strong K, Guthold R, Yang J, Lee D, Petit P, Fitzpatrick C.", are listed below the title and are enclosed in a red rectangular box. Below the authors is their affiliation: "Department of Chronic Diseases and Health Promotion, World Health Organization, Geneva, Switzerland. strongk@who.int". The abstract text begins with "This paper presents comparable tobacco use prevalence estimates for the WHO European region for two common definitions of tobacco use: current smoker (occasional and daily) and daily smoker. Data collections held in the WHO Global InfoBase (www.who.int/infobase) were used to examine patterns of tobacco use at the country

The Cochrane Library

What is The Cochrane Library?

The Cochrane Library is the single most reliable source for evidence on the effects of health care.

The Cochrane Library brings together in one place research on the effectiveness of healthcare treatments and interventions. It is the gold standard in evidence-based medicine and provides access to the most objective information on the latest in medical treatment.

Many countries have access

The Cochrane Library is available to ALL HINARI eligible countries. Please see the

<http://www.thecochranelibrary.com/view/0/FreeAccess.html>

Many developed countries also provide its citizens with some form of open access

Norway, Finland, Denmark, Ireland to name just a few.

WHO Regional Databases (open access)

<http://www.who.int/library/databases>

- Journal indexes of locally produced information
- Complement the internationally known bibliographic databases
- Higher relevance for other developing countries
- South – South information sharing
- Important for systematic reviews
- Interesting tid bit, Web of Knowledge (June 2008) added 700 more titles to its database. Guess how many from Africa?

Developing Country Health Databases

Geographical map report

In order to give access to information published in or related to Africa and to encourage local publishing in collaboration with [the Association for Health Information and Libraries in Africa \(AHILA\)](#), WHO has produced health literature and information sources.

This index is called African Index Medicus (AIM).

▶ [access the database...](#)

Why index African literature?

The need for improved access to what has been published on health issues in African countries has long been felt by researchers, development agencies, health administrators and planners both inside and outside the continent. Very few African health and biomedical information sources are included in the world's leading bibliographic databases and there is a wealth of untapped information in books, reports and studies from international development agencies, nongovernmental organizations and local institutions.

Only by awareness of what work has already been done, can further advances be made; giving visibility to locally published material avoids overlapping, conflicting or redundant research work or the unnecessary duplication of health learning materials. New studies would then build on earlier reports of projects or research already undertaken. This would reduce costs of duplicated efforts, improve on methodology earlier used and make research more cost-beneficial and original.

Printed knowledge generated in African countries is given global exposure in the African Index Medicus. It will promote African publishing by encouraging writers to publish in their country or regional journals, whereas now scientists and researchers in developing countries are competing for publication space in the few world-wide "prestigious" journals.

African Index Medicus (AIM) – Index of African Health Journal and Grey Literature with some full text links.

The image shows a bibliographic record from the African Index Medicus (AIM) database. The record is displayed in a light blue background with various fields. A red box highlights the 'Publication type' field, which is 'theses'. Another red box highlights the 'Electronic Access' field, which is 'Full Text-1'. A red arrow points from the 'Full Text-1' link to the PDF document shown in Adobe Reader. The PDF document is titled 'LES INFARCTUS DU MYOCARDE THROMBOLYSES : A propos de 36 cas au service de' and is from the year 2003-2004. The Adobe Reader interface shows the document is open at 86% zoom.

HINARI Access to Research in Health Programme

The HINARI Programme, set up by WHO together with major publishers, enables developing countries to gain access to one of the world's largest collections of biomedical and health literature. More than 7,000 journal titles are now available to health institutions in 109 countries, areas and territories benefiting many thousands of health workers and researchers, and in turn, contributing to improved world health.

News

New Training Material

We have developed two new training modules. One is titled 'Module 7.5: E-book Resources for HINARI Users'. The 1st part of the module reviews E-books resources available from HINARI Partner Publishers via the Reference Sources drop down menu (e.g. The Oxford Textbook of Medicine). The 2nd part is an overview of free E-books available from the Internet (e.g.

Tip of the Month for Using HINARI

Tip of the Month for Using HINARI: Promoting HINARI in science-related disciplines at universities

Many HINARI users are based in health-related colleges or research institutes that are part of larger universities. We have discovered several cases where the basic science colleges and/or departments at the main university campus were not aware of the availability of HINARI's numerous 'science related' e-journals. In the 'Find

AGORA

Access to Global Online Research in Agriculture

Brief video about AGORA

Countries, areas and territories eligible for HINARI, AGORA and OARE

- AGORA (Access to Global Online Research in Agriculture) was launched by FAO in October 2003. AGORA is the agriculture "sister" initiative (or version) of HINARI.
- HINARI and AGORA work closely together on content, online systems, administration, training and promotion. Academic, government, research institutions in 107 countries with access to almost 1200 journals.
- Main partners: publishers, Cornell University (Mann Library), WHO.
- Web site: <http://www.aginternetwork.org>

<http://www.oaresciences.org/en/>

Over 1,000 scientific journal titles owned and published by over 200 prestigious publishing houses, scholarly societies, and scientific associations are now available in 70 low income countries.

Another 36 countries will be added by 2008.

Research is provided in a wide range of disciplines, including biotechnology, botany, climate change, ecology, energy, environmental chemistry, environmental economics, environmental engineering and planning, environmental law and policy, environmental toxicology and pollution, geography, geology, hydrology, meteorology, oceanography, urban planning, zoology, and many others.

HINARI & AGORA & OARE

www.Research4Life.org

Welcome to the **Research4Life** webpages. These pages will be built up as a central resource for journalists, researchers, students and the general public who are interested in the three Research4Life programs (HINARI, AGORA and OARE) that are a key source of scientific information in the areas of health, agriculture and the environment for developing countries.

The **Research4Life** programs are unique, cooperative public-private partnerships (PPPs) between UN agencies, STM publishers, universities and university libraries, philanthropic foundations and technology partners.

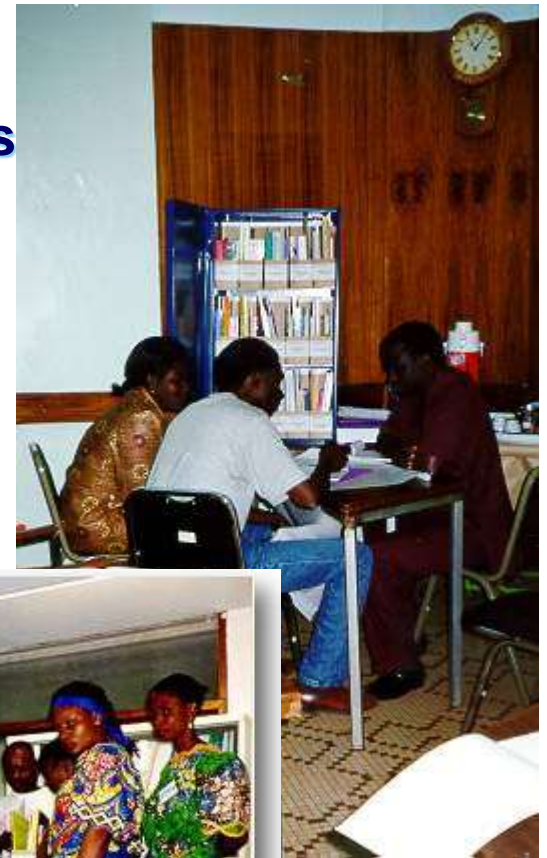

WHO Reproductive Health Library (RHL)

"informing best practice in reproductive health"

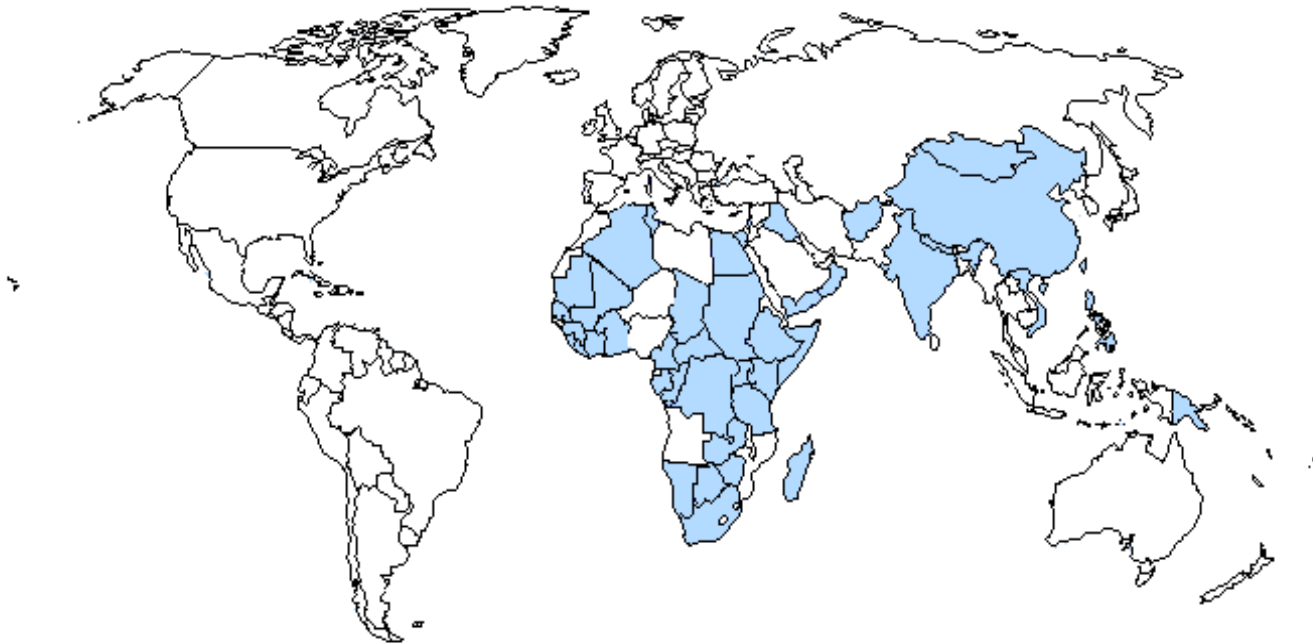

- RHL is an electronic library developed 10 years ago in 1997 in the World Health Organization's programme to "Map Best Reproductive Health Practices" (<http://apps.who.int/rhl/>) - Free for developing countries via the Internet or on CDROM
- a well-established resource enabling health care workers worldwide to keep up-to-date with the latest evidence in reproductive health and to view videos showing techniques in real life settings
- the full contents of currently more than 134 of clinical decision-making systematic reviews mainly from the Cochrane Collaboration (well-known for its high standard and independence)

Access to reliable health information for those who need it

- Access to health information is an integral part of all health systems because it can improve people's health.
- The Global Health Library (GHL) will provide first-step access to reliable health information in paper form, electronic form, and any other media to those who need it.
- The GHL will offer an opportunity to provide a virtual platform that assembles multiple resources and points to content in all available formats that will be targeted according to the needs of specific user groups.
