# HINARI

---

- The HINARI Access to Research Programme is coordinated by the World Health Organization (WHO)
- HINARI is a public-private partnership between the WHO, publishers and other health care content owners
- To provide biomedical and health care research and guideline information to non-profit academic and research institutions, governmental and policy making departments in low income countries.

Delivering access to more than 7000  
of the world's leading primary research and review journals

CC Martin LaBar

CC Grant MacDonald

CC Raveesh Vyas

CC Paul Goyette

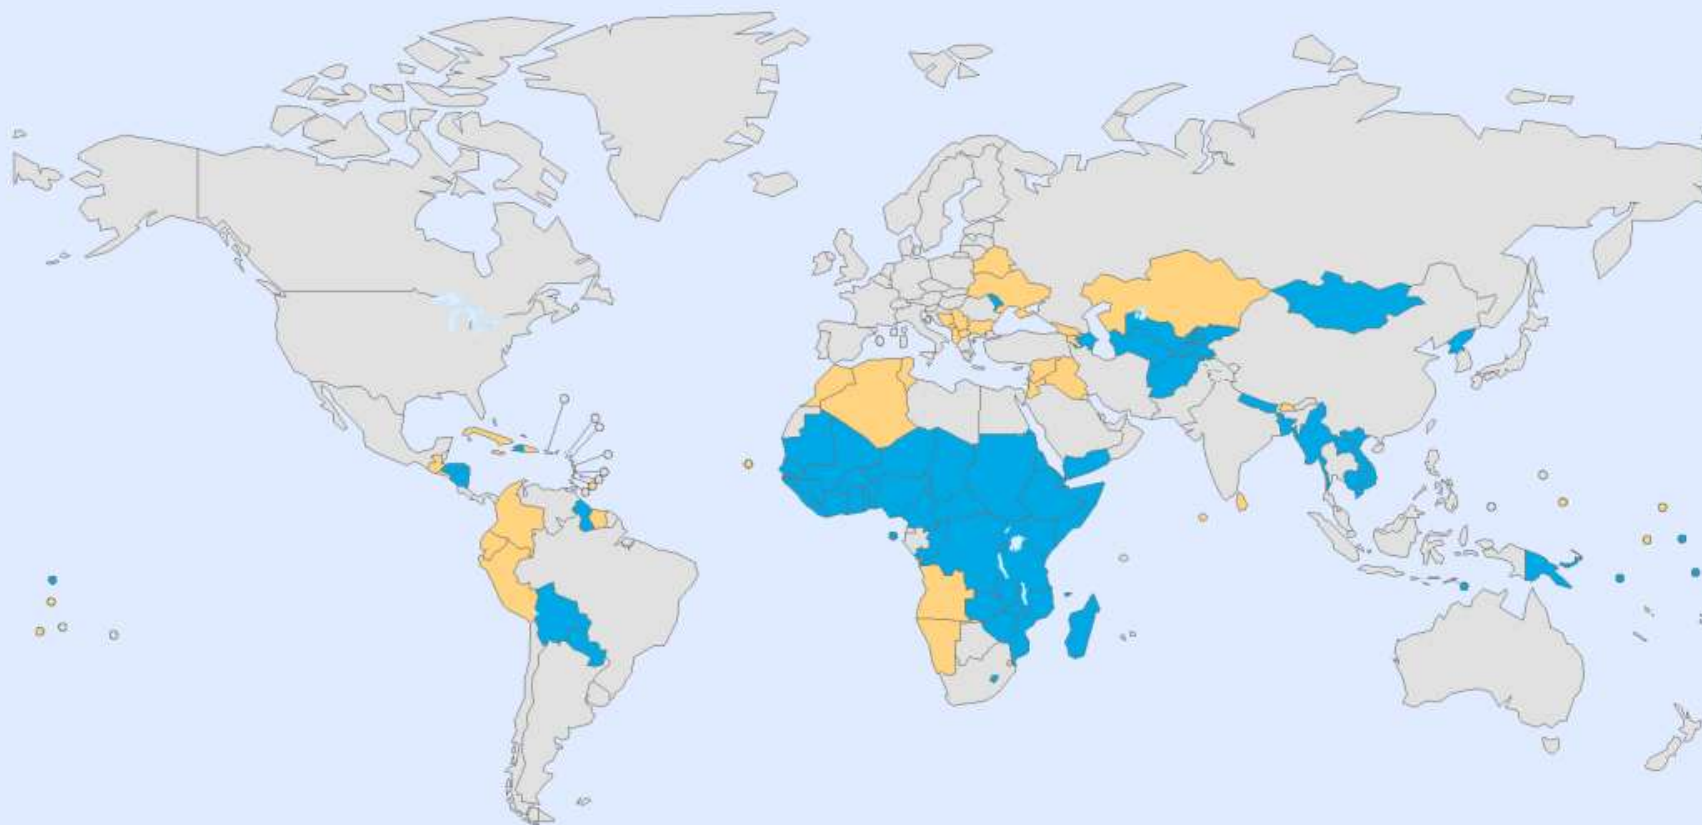

# Eligibility

---

- ❑ Country eligibility based on gross national income (GNI) per capita (World Bank figures).
  - Band 1 countries have GNI per capita below \$1600; eligible for free access.
  - Band 2 countries have GNI per capita between \$1601 - \$4700; pay a fee of \$1000 per year / institution.
- ❑ Lists of countries, areas and territories:
  - <http://www.who.int/hinari/eligibility/en/>

# Countries, areas and territories eligible for HINARI, AGORA and OARE

■ Band 1 countries

■ Band 2 countries

The boundaries and names shown and the designations used on this map do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines on maps represent approximate border lines for which there may not yet be full agreement.

# Primary Beneficiary Institutions

---

Eligible categories of institutions are:

- ▣ national universities
- ▣ research institutes
- ▣ professional schools (medicine, nursing, pharmacy, public health, dentistry)
- ▣ teaching hospitals
- ▣ Government: ministries and agencies
- ▣ national medical libraries
- ▣ locally based non-governmental agencies

All permanent and visiting faculty, staff members and students are entitled to access and can obtain the institutional User Name and Password.

# Partners

---

## ❑ Principal Publishers

- ❑ Elsevier Science
- ❑ Springer
- ❑ Wiley-Blackwell
- ❑ Sage
- ❑ Taylor & Francis
- ❑ Lippincott/Williams & Wilkins
- ❑ BioOne
- ❑ Oxford University Press
- ❑ Nature Publishing
- ❑ Other science/technical/medical publishers

## ❑ Principal Programme Partners

- ❑ World Health Organization - WHO
- ❑ Food and Agriculture Org. – FAO
- ❑ United Nations Environment Programme – UNEP
- ❑ Yale University Library
- ❑ Mann Library/Cornell University
- ❑ International Association of Scientific, Technical and Medical Publishers – STM
- ❑ Information Training and Outreach Centre for Africa
- ❑ National Library of Medicine
- ❑ Microsoft
- ❑ Librarians Without Borders®/MLA

# HINARI Website

The screenshot shows the HINARI website homepage. A red box highlights the URL <http://www.who.int/hinari/en/> in the browser's address bar. Another red box highlights the 'Login to HINARI' button in the top right corner. A red line points from the URL box to a text box at the bottom. The website header includes the HINARI logo, navigation links in multiple languages (Arabic, Chinese, English, French, Russian, Spanish), and a search bar. The main content area features the title 'HINARI Access to Research in Health Programme' and a description of the program. A left-hand column contains a list of links: 'HINARI', 'About HINARI', 'Full-text journals, databases and other resources', 'Eligibility', 'Register', 'Partners', 'Publishers' statement', 'Frequently asked questions', 'Training', and 'Using HINARI'. On the right, there is a link to 'Sitio HINARI em Português' and a section for 'Other Sister Programmes with' featuring the 'research4life' logo.

**HINARI Access to Research in Health Programme**

The HINARI Programme, set up by WHO together with major publishers, enables developing countries to gain access to one of the world's largest collections of biomedical and health literature. More than 7,000 journal titles are now available to health institutions in 109 countries, areas and territories benefiting many thousands of health workers and researchers, and in turn, contributing to improved world health.

# Registration

<http://extranet.who.int/hinari/en/registration.php>

The screenshot shows the HINARI Registration page. At the top, there are language links: English, Español, and Français. Below this is the HINARI logo with the tagline 'ACCESS TO RESEARCH'. To the right of the logo is a 'Find Journals:' section with a dropdown menu showing '- Select -' and a 'LOGIN' button. Below the logo and search section is a navigation bar with links: Home, About HINARI, Journals, Using HINARI, Register, and Contact us. The 'Register' link is highlighted. The main content area is titled 'HINARI Registration'. It contains three paragraphs of text. The first paragraph states that institutions in certain countries may be eligible to join HINARI and should check eligibility. The second paragraph states that if a user is a member of a university or professional school, their institution might already be registered, and they should check the list of 'REGISTERED UNIVERSITIES AND PROFESSIONAL SCHOOLS' before registering. The third paragraph explains that upon registration, a common username and password will be issued for all staff at the institution, and suggests that the institution's librarian be the main contact point. A red arrow points from the 'REGISTERED UNIVERSITIES AND PROFESSIONAL SCHOOLS' link in the second paragraph to the URL in the block below.

## HINARI Registration

If your institution is an academic, government or research institution located in one of the countries listed below, you may be eligible to join HINARI ([check eligibility](#)). Please register by completing this form. *Only one registration is required per institution.*

If you are a member of a university or professional school, your institution might already be registered with HINARI. Please check our list of [REGISTERED UNIVERSITIES AND PROFESSIONAL SCHOOLS](#) before registering.

Once we receive your registration, we will issue a common username and password for all staff at your institution. As HINARI is in fact a virtual library, we suggest that your institution's librarian be our main contact point. Should your institution not have a library, we will send the username, password and instructions for access to the journals to your director.

## Welcome to BMJ Learning

BMJ Learning is the world's largest and most trusted independent online learning service for medical professionals. We offer over 500 peer reviewed, evidence based learning modules and our service is constantly updated. Train and test your knowledge and skills today.

Accreditation of BMJ Learning courses is provided by several international authorities - including DHA, HAAD, EBAC, MMA, CME, RNZCGP, KIMS, and others. Please contact your relevant College or Association for information, or to request that they accredit BMJ Learning if they do not already.

## This week

If you complete more than 30 modules on BMJ Learning over the next year, we will send you a special certificate stating that you are registered as a **high user** of the site. To get your certificate contact us on [customerservice.learning@bmjgroup.com](mailto:customerservice.learning@bmjgroup.com)

## Welcome to PubMed

PubMed comprises more than 19 million citations for biomedical articles from MEDLINE and life science journals. Citations may include links to full-text articles from PubMed Central or publisher web sites.

## Using PubMed

[PubMed Quick Start](#)[New and Noteworthy](#) [PubMed Tutorials](#)[Full Text Articles](#)[PubMed FAQs](#)

We now will have opened **HINARI/PubMed** and will enter a search in the PubMed **Search box**.

In this example, we will enter a search for **malaria infections AND Africa** into the **Search** or query box. To execute the query, click on the **Search** button.

## 2. Identification of Plasmodium malariae, a human malaria parasite, in imported chimpanzees.

Hayakawa T, Arisue N, Udono T, Hirai H, Sattabongkot J, Toyama T, Tsuboi T, Horii T, Tanabe K.

Laboratory of Malariology, International Research Center of Infectious Diseases, Research Institute for Microbial Diseases, Osaka University, Suita, Osaka, Japan. hayakawa@biken.osaka-u.ac.jp

It is widely believed that human malaria parasites observations suggest that great apes are likely to apes, we screened 60 chimpanzees imported into mitochondrial genome, we identified infection of P chimpanzees that were imported about thirty years Japan, indigenous malaria disappeared more than chimpanzees were infected in Africa, and P. malariae isolates were brought into Japan from Africa with their hosts, suggesting persistence of parasites at low level for thirty years. Such a long term latent infection is a unique feature of P. malariae infection in humans. To our knowledge, this is the first to report P. malariae infection in chimpanzees and a human malaria parasite from nonhuman primates imported to a nonendemic country.

EV, Bassat Q, David C, Bardaji A, Letang E, Saúte F, Aponte JJ, Thompson R, Alonso PL.

Centro de Investigação em Saúde da Manhica (CISM), Mozambique. jahit.sacarlal@manhica.net

**BACKGROUND:** Approximately 46 million of the estimated 60 million deaths that occur in the world each year take place in developing countries. Further, this mortality is highest in Sub-Saharan Africa, although causes of mortality in this region are not well documented. The objective of this study is to describe the most frequent causes of mortality in children under 15 years of age in the demographic surveillance area of the Manhica Health Research Centre, between 1997 and 2006, using the verbal autopsy tool. **METHODS:** Verbal autopsy interviews for causes of death in children began in 1997. Each questionnaire was reviewed independently by three physicians with experience in tropical paediatrics, who assigned the cause of death according to the International Classification of Diseases (ICD-10). Each medical doctor attributed a minimum of one and a maximum of 2 causes. A final diagnosis is reached when at least two physicians agreed on the cause of death.

**RESULTS:** From January 1997 to December 2006, 3,730 deaths with 246,6 were conducted on 3,002 (80.4%) of the communicable diseases accounted for Malaria was the single largest cause, a death, followed by HIV/AIDS (8.3%) and big challenges that lie ahead in the fight. Manhica area is typical of developing countries where malaria, pneumonia and HIV/AIDS are important causes of death.

## HINARI Training Materials

The initial HINARI training package was a collaboration

research4life

From the initial page of the **HINARI** website, we have accessed the **Training Materials** listing. A combination of PowerPoint presentations and Word exercises, these modules are for instruction at your institution and can be adapted locally.

This slide lists the modules for the principal components of HINARI. Note the **Additional Resources** module which features the material in the **Reference Sources** section. (e.g. **CINAHL**, **Evidence-based Practice Resources**).

### :: Module 1. HINARI: The Beginning

This part introduces you to: Basic Internet Concepts; E-Resources & Internet Searching; Health Internet Information

### :: Module 2. HINARI Website Interface & Resources

This part of the course is a guided tour of the HINARI Web-interface

### :: Module 3. HINARI Partner Publishers' Resources

This part of the course is intended to show a guided tour of using publisher's resources

### :: Module 4. HINARI/PubMed

This part of the course is to introduce you to: PubMed Website Interface; Using Limits; MeSH; Index, History, Access FullText Articles; MyNCBI

### :: Module 5. Managing References

This part of the course is intended to show a guided tour of the EndNote Web Reference Management Software

### :: Module 6. HINARI Next Steps

This part of the course is to introduce you to: Marketing Strategies for HINARI; Training Users on HINARI; Repackaging Health Information; Strategies for Managing Change for HINARI

### :: Module 7. HINARI Additional Resources

These modules highlight several Reference Resources available through HINARI. A WHO Resources module is also included.

AUTHORSHIP SKILLS

Hinari Authorship Skills

Task of writing a research paper can be daunting. This presentation will provide an overview of "how to write a well-structured research paper for publication". Intellectual Property material has been added. (Revised

Due to requests from participants at workshops, the **Authorship Skills** modules have been developed. This material reviews the peer-review publishing process, discusses copyright and plagiarism issues and includes a web-bibliography with annotated links to material on the Internet.

Besides **HINARI**, there are two 'sister' research4life programmes – **AGORA** for agriculture research and **OARE** for environmental research. This website contains an overview of all three programs.

#### RESEARCH4LIFE

The demand for scientific literature in developing countries had gone unfulfilled for many years with thousands of students, researchers and academics struggling to gain access to current scientific information. While students were unable to access the literature and acquire the knowledge they needed, researchers and academics were confronted with mounting difficulties in publishing their findings in peer-reviewed journals, updating their teaching curricula and identifying funding.

Research4Life is the collective name for three public-private partnerships which seek to help achieve the UN's Millennium Development Goals by providing the developing world with access to critical scientific and social science research. Beginning in 2002, the three programmes: Health Access to Research Initiative (HINARI); Access to Global Online Research in Agriculture (AGORA); and Online Access to Research in the Environment (OARE), have given researchers at 4,500 institutions in 108 developing countries free or low cost access to over 7,000 journals provided by the world's leading academic and professional publishers.

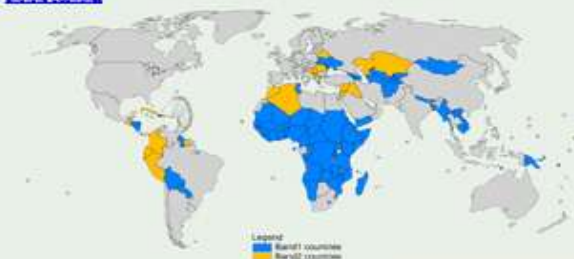

Since 2002, Research4Life programmes have bridged the knowledge gap and has impacted the research – and the lives – of those living in some of the world's poorest countries. Research4Life is a public-private partnership of the WHO, FAO, UNEP, Cornell and Yale Universities and the International Association of Scientific, Technical and Medical Publishers. Working together with technology partner Microsoft, the partnership's goal is to help attain six of the UN's eight Millennium Development Goals by 2015, reducing the scientific knowledge gap between industrialized countries and the developing world.

#### What's New

Access to environmental research in developing nations has grown to 1,500 institutions in less than three years.

Research4Life today announces that the Online Access to Research in the Environment (OARE) programme has registered 1,500 institutions since its launch in 2006, an increase of nearly 700 percent. This means that scientists, researchers and environmental policymakers in 1,500 not-for-profit institutions in the world's poorest countries can gain free or low cost access to the latest environmental science literature from the world's leading journals, books and databases. [Read more](#)

#### Eligible Countries

**HINARI**  
ACCESS TO RESEARCH

Launched in 2002, **HINARI** is managed by the World Health Organization in partnership with Yale University Library and over 100 publishers. 2000 public institutions in 105 eligible countries have already registered for access to HINARI, which provides access to over 5500 peer-reviewed journals covering medicine, nursing and related health and social sciences.

**AGORA**

Launched in 2002, **AGORA** is managed by the Food and Agriculture Organization in partnership with Cornell University and over 40 publishers. Over 1,600 institutions have registered for access to AGORA which provides access to over 1,000 high quality international journals covering agriculture, fisheries, food, nutrition, veterinary science and related biological, environmental and social sciences in public institutions across the world. It also includes several important databases and indexes. The journal can be searched using a special subset of OAI Abstracts.

**OARE**

Launched in 2006, **OARE** is managed by the United Nations Environment Programme in partnership with Yale University and more than 50 publishers. Over 1,500 institutions have registered for OARE to access more than 2,000 scientific journals in a wide range of disciplines including environmental toxicology and pollution, ecology, botany, ecology, environmental chemistry, geology, hydrology, oceanography, meteorology, climatology, geography, environmental economics, environmental law and policy, conservation policy and planning, environmental biotechnology, environmental engineering, energy, and many other disciplines.
