Organization

## The Ideal World "click and download"

A screenshot of the PubMed website interface. At the top, the NCBI logo is on the left, and the PubMed logo is in the center, with the text "A service of the U.S. National Library of Medicine and the National Institutes of Health" and "www.pubmed.gov" to its right. Below the logos is a navigation bar with tabs: "All Databases", "PubMed", "Nucleotide", "Protein", "Genome", "Structure", "OMIM", "PMC", and "Journals". A search bar contains the text "PubMed" and "for", with "Go" and "Clear" buttons. Below the search bar are buttons for "Limits", "Preview/Index", "History", "Clipboard", and "Details". A "Display" section shows "AbstractPlus" selected, with "Show 20", "Sort By", and "Send to" options. Below this, it says "All: 1" and "Review: 0". A search result is listed: "1: Lancet. 2008 Nov 15;372(9651):1707." To the right of the result is a button labeled "THE LANCET" with "FULL-TEXT ARTICLE" underneath. Below the result is a link labeled "Full text". A text box contains the text "Obama and health: change can happen." Below this, it says "[No authors listed]" and "PMID: 19013306 [PubMed - indexed for MEDLINE]".

#### Abstract

Thirty healthy trammers were examined in underground haulage mines during their normal activity. Physiological strain in terms of heart rate (HR) varied between 101.6 and 104.7 beats/min with mean net cardiac cost of 33.06 and 34.06 beats/min for younger and older groups respectively. The average relative cardiac cost was lower for younger subjects than for older ones. Oxygen consumption (VO<sub>2</sub>) was measured with an Oxylog-II machine (UK); subsequently values were estimated. Maximum aerobic capacity was estimated with an indirect method following a standard step test protocol. The responses revealed that the average VO<sub>2</sub> during the activity was 0.75 and 0.8 L/min, which corresponded to energy expenditure (EE) of 3.8 and 3.97 Kcal/min for younger and older subjects respectively. The workload in terms of HR and EE was moderate, whereas the aerobic strain experienced by aged workers was above the acceptable level.

## But which journal website? Electronic access is complicated

### FACT

- WHO Library as an example has an ONLINE subscription to the LANCET from 1823 to present and access to PRINT back to 1909
- REALITY
- NOT all citations in PubMed have links to the full text even when the full text is available.

11 | Finding the full text in 7 simple steps | October 24, 2014

## And even when full text So many options!

Select a website below to get this article.

**ELSEVIER**  
Obama and health: change can happen  
*The Lancet*, Volume 372, Issue 9651, Pages 1707-1707  
The Lancet

You can get the full-text article here... ...if you are:

Am J Public Health. 2006 Jan;96(1):62-72. Epub 2005 Dec 1.

**The World Health Organization and the transition from "international" to "global" public health.**

Brown TM, Custio M, Fee E.

Department of History and the Department of Community and Preventive Medicine, University of Rochester, Rochester, NY, USA.

**Abstract**

The term "global health" is rapidly replacing the older terminology of "international health." We describe the role of the World Health Organization (WHO) in both international and global health and in the transition from one to the other. We suggest that the term "global health" emerged as part of larger political and historical processes, in which WHO found its dominant role challenged and began to reposition itself within a shifting set of power alliances. Between 1948 and 1998, WHO moved from being the unquestioned leader of international health to being an organization in crisis, facing budget shortfalls and diminished status, especially given the growing influence of new and powerful players. We argue that WHO began to refashion itself as the coordinator, strategic planner, and leader of global health initiatives as a strategy of survival in response to this transformed international political context.

*J. Health Serv. Res. Policy.* 2012 Jan;17(1):4-10. Epub 2011 Oct 3.

**Climate for evidence-informed health systems: a profile of systematic review production in 41 low and middle-income countries, 1996-2008.**

Lavis J, Lavis J, Hamandi A, Cheung A, El-Jardali F.

School of Medicine, Faculty of Health Sciences, Queen's University, Kingston, Canada.

**Abstract**

**OBJECTIVE:** To describe systematic review production in 41 countries in Africa, the Americas, Asia and the eastern Mediterranean to understand one dimension of the climate for evidence-informed health systems and to provide a baseline for an evaluation of knowledge translation initiatives.

**METHODS:** Our focus was systematic reviews published between 1996 and 2008 that had a corresponding author based in, or that appeared to target, one of the countries in these regions. We searched both Medline and Embase using validated search strategies, identified citations with a country name in the corresponding author's institutional affiliation or as a textword (i.e., an explicit mention in the title or abstract) or keyword, and coded articles describing a systematic review. We followed the same citation identification procedure for Health Systems Evidence, a database containing systematic reviews about health systems.

**RESULTS:** Systematic review production increased between three-fold (for Africa in Medline) and 110-fold (for Asia in Embase) between the first period (1996-2002) and second period (2003-2008). In the second period, China was more often the home of corresponding authors and the target of reviews than any other country. No systematic reviews were produced by a corresponding author based in nine countries, or appeared to target five countries. Only 48 reviews identified through Medline and Embase addressed health systems, and 35 health systems reviews identified through Health Systems Evidence addressed these countries.

**CONCLUSION:** In many countries, those seeking to support evidence-informed health systems cannot turn to experienced local systematic reviewers to help them to find and use systematic reviews or to conduct reviews on high priority topics when none exists. These findings suggest the need for local capacity-building initiatives.

### Studiu asupra incidenței reale a infecțiilor nosocomiale de sediu

#### chirurgical și a factorilor de risc specifici

M. St. Ghelase, H. Trăilă, D. Mărgărețescu, F. Ghelase, I. Georgescu, S. Râmboiu, D. Cărtu (Chirurgia, 104 (1): 41-47)

#### Introducere

Cu toate progresele făcute în chirurgie, infecția a fost și rămâne complicația postoperatorie cea mai frecventă, cea mai redutabilă și responsabilă de cele mai multe decese postoperatorii. Termenul de infecție nosocomială (I.N.) și mai ales cel de infecție nosocomială postoperatorie de sediu chirurgical este și la această dată incomplet/incorct cunoscut de o mare parte a lumii medicale. O aducere la zi a definițiilor și criteriilor de recunoaștere corectă a IN este necesară pentru ca lupta împotriva lor să poarte suficiente succese. Încă din 1992 Grupul de Acțiune împotriva infecțiilor chirurgicale (Surgical Wound Infection Task Force) a înlocuit termenul de infecție de plagă chirurgicală IPC/SWI (Surgical Wound Infection) cu acela de infecție de sediu chirurgical ISC/SSI (Surgical Site Infection) (1). Noua denumire permite diferențierea infecțiilor la nivelul sedilor ce au fost instrumentate chirurgical în scop terapeutic în infecții de organ-spaiu, precum cavitatea peritoneală și/sau osul, infecții profunde ale structurilor subaponevrotice și în infecții superficiale (supraaponevrotice, suprafasciale), interesând pielea și tesutul celular subcutanat la locul inciziei, constituindu-se astfel într-o categorie aparte de infecții nosocomiale, pentru a nu exista confuzie cu infecțiile nosocomiale cutanate și ale tesuturilor moi subcutane (infecții nosocomiale cu frecvență scăzută) (fig. 1). I.P.O./I.S.C. (infecțiile postoperatorii/infecțiile de sediu chirurgical), datorită spectrului larg de posibile aspecte clinice este un termen greu de definit în mod precis fără a folosi criteriile de definire stabilite de C.D.C. (Center for Disease Control, Atlanta, Georgia, SUA) folosite de NNIS (National Nosocomial Infection Surveillance System al SUA) și adoptate în aceeași formă de către programul HELIOS (Hospital's in Europe Link for Infection Control and Surveillance al EU) (2,3) și mai nou prin ordinul nr. 916 /2006 al Ministerului Sănătății anexa 2 (4). Acesta introduce și noua definiție de I.N., mai completă, lărgind aplicabilitatea definiției la un număr mai mare de cazuri, incluzându-le pe cele manifeste după externare și pe cele care erau eliminate anterior pe baza existenței infecției la internare. Scopul lucrării: a fost estimarea incidenței reale a infecțiilor nosocomiale de sediu chirurgical într-o clinică de chirurgie generală, precum și identificarea importanței factorilor de risc asociați în mod uzual cu dezvoltarea acestor infecții în țara noastră, pe baza noilor criterii diagnostice.

 Article de Jean-Yves Nau  

Moment historique ? Peut-être. En toute hypothèse, il fallait, mercredi 9 novembre, être à Genève et plus précisément dans l'immeuble de verre et définitivement non fumeur de l'OMS pour prendre la mesure de l'événement : la lutte planétaire contre l'épidémie de grippe aviaire vient, osons l'imaginer, de prendre son envol. Au terme de trois jours d'échanges techniques autant que diplomatiques, de langue de bois sur l'estrade et d'échanges plus qu'animés en coulisse, plus de 600 délégués d'une centaine de pays sont enfin convenus de la nécessité de mobiliser d'urgence des ressources financières et autres pour les pays déjà touchés par la grippe aviaire ainsi que pour les pays les plus exposés, et de reconnaître et de combattre une pandémie humaine dès qu'elle se déclare. Ils ont aussi arrêté les principaux éléments d'un plan d'action mondial de lutte contre la grippe aviaire chez l'animal, simultanément destiné à réduire la menace d'une pandémie de grippe humaine.

A l'origine de cet heureux consensus, on trouve trois organisations onusiennes (FAO, Banque mondiale, OMS) et l'Office international des épidémiologistes qui souhaite depuis peu que l'on parle de l'Organisation mondiale de la santé animale tout en gardant le bel acronyme d'Oie. Les mesures à prendre face à la menace que constitue le virus aviaire H5N1 qui progresse en Asie et qui a été identifié dans certaines parties de l'Europe sont désormais connues et affichées :

- Lutte à la source chez les oiseaux : améliorer les services vétérinaires, les plans de préparation aux situations d'urgence et les campagnes de lutte, et notamment l'abattage, la vaccination et les compensations ; aider les pays à combattre la grippe aviaire chez les animaux.
- Surveillance : renforcer les systèmes de dépistage précoce et de riposte rapide pour la grippe humaine et animale ; renforcer les capacités de laboratoire.
- Endiguement rapide : fournir un soutien et une formation pour l'examen des cas et des groupes de cas chez l'homme et l'animal, et planifier et tester les activités d'endiguement rapide.
- Préparation à une pandémie : élaborer et tester des plans nationaux de préparation à une pandémie, procéder à un exercice mondial de riposte à une pandémie, renforcer les capacités des systèmes de santé, former les cliniciens et les administrateurs des services de santé.
- Plans de pays intégrés : élaborer des plans nationaux intégrés associant tous les secteurs pour la fourniture d'un soutien technique et financier coordonné.
- Communication : à l'appui de tout ce qui précède, une communication factuelle et transparente, en particulier sur les risques, est essentielle.

«Nous devons utiliser au mieux tous nos atouts et toutes nos compétences, éviter les doubles emplois, partager notre savoir, tirer la leçon de notre expérience et affiner nos méthodes de travail, à pour sa part déclaré le Dr David Nabarro, coordonnateur principal du système des Nations Unies pour la lutte contre la grippe aviaire et humaine. Nous devons avant tout soutenir les mécanismes qui existent dans les pays

When articles/books not available in the Library, nor online nor in other local libraries ?

- Send message with complete citation to [documentdelivery@who.int](mailto:documentdelivery@who.int)
- Limited service ( 3 REQUESTS per month per **WHO staff**)
- Interns, APW, volunteers request via WHO supervisor)
- Library will notify if available through Document Delivery or other means.
- We encourage to you to visit both international and "Genevois" libraries to access their resources. WHO library reserves the right to cancel any request due to cost etc.

## Bulk Orders

- Units/Departments can arrange with the WHO library to obtain a large number of articles at a pricing
- Calculate on approx. 20 USD per article
- Provide WHO Library with a list of reference and the Library can provide a costing for the articles
- Articles are provided in PDF format
- Consult with WHO Library by emailing LNK@who.int.

An electronic version of the presentation will be  
sent to all participants who have  
signed their name on the list

## Thank You - Merci
