How to use WHO’s family planning guidelines and tools – 2

Mary Lyn Gaffield and Mario Festin
Human Reproduction Team, World Health Organization
Learning objectives

- To identify the purpose of WHO's family guidelines and tools.
- To identify and apply medical eligibility criteria and practice recommendations for family planning service delivery.
- To use these WHO family planning tools for service provision.
- To list other WHO reference materials on family planning.
The need for evidence-based guidance

- To base family planning practices on the best available published evidence
- To address misconceptions regarding who can safely use contraception
- To reduce medical barriers
- To improve access and quality of care in family planning
Family planning guidelines and tools

- Medical Eligibility Criteria
- Selected Practice Recommendations
- The Medical Eligibility Criteria (MEC) Wheel
- Reproductive Choices and Family Planning for People with HIV (to be updated)
- Guide to family planning for community health care providers and their clients

- Decision-Making Tool (to be updated)
- Global Handbook
Part 2

- Family Planning Global Handbook for Providers
- Family Planning Training Resource Package (TRP)

Others:
- Guideline documents on Human rights and contraception
- Task Sharing guidelines for contraception
- Essential medicines list (EML)
- Global strategy documents in Reproductive health
- Implementation and scaling up tools

- Website and social media links
Family Planning – A Global Handbook for Providers

What’s New in This Edition?

- **New family planning recommendations from WHO:**
  Women who are breastfeeding can start progestin only pills or implants at any time postpartum; New Selected Practice Recommendations on the levonorgestrel implant Levoplant (Sino-Implant (II)), subcutaneous DMPA, the combined patch, the combined vaginal ring, and ulipristal acetate for emergency contraception; When to start a family planning method after taking emergency contraceptive pills.

- **New coverage in this edition:**
  Human rights: Family Planning Providers’ Contribution; “How Can a Partner Help?”; Giving the Injection with Subcutaneous DMPA in Uniject (Sayana Press); Teaching Clients to Self-Inject; Progesterone-releasing vaginal ring; Clients with disabilities; Safer Conception for HIV Serodiscordant Couples; “LIVES”—5 steps for helping women subjected to violence; Counseling About Effectiveness; Task-Sharing: WHO Recommendations; Considering Progestin-Only Injectables Where HIV Risk Is High: Counseling Tips; Ruling Out Pregnancy.

- **Expanded or updated coverage:**
  Instructions on implant insertion; Levonorgestrel IUD; Prenatal care; Infant feeding for women with HIV; Infertility; Effectiveness of family planning methods; Medical Eligibility Criteria for Contraceptive Use.
Contents: Method chapters
Chapter Headings

- Key points
- Helping the Client Decide about Combined Oral Contraceptives (COCs)
- Side effects, health benefits, and risks
  - COCs and cancer
- Who can and cannot use combined oral contraceptives
  - Medical eligibility criteria
- Providing combined oral contraceptives
- Following up users of combined oral contraceptives
- Questions and Answers
CHAPTER 1

Combined Oral Contraceptives

Key Points for Providers and Clients

- Take one pill every day. For greatest effectiveness a woman must take pills daily and start each new pack of pills on time.
- Take any missed pill as soon as possible. Missing pills risks pregnancy and may make some side effects worse.
- Bleeding changes are common but not harmful. Typically, there is irregular bleeding for the first few months and then lighter and more regular bleeding.
- Can be given to a woman at any time to start now or later.

What Are Combined Oral Contraceptives?

- Pills that contain low doses of 2 hormones—a progestin and an estrogen—like the natural hormones progesterone and estrogen in a woman’s body.
- Combined oral contraceptives (COCs) are also called “the Pill” low-dose combined pills, OCPs, and OCs.
- Work primarily by preventing the release of eggs from the ovaries (ovulation).

How Effective?

Effectiveness depends on the user: Risk of pregnancy is greatest when a woman starts a new pill pack 3 or more days late, or misses 3 or more pills near the beginning or end of a pill pack.

Known Health Benefits

Help protect against:
- Risks of pregnancy
- Cancer of the lining of the uterus (endometrial cancer)
- Cancer of the ovary
- Symptomatic pelvic inflammatory disease
May help protect against:
- Ovarian cysts
- Iron-deficiency anemia
Reduce:
- Menstrual cramps
- Menstrual bleeding problems
- Ovulation pain
- Excess hair on face or body
- Symptoms of polycystic ovarian syndrome (irregular bleeding, acne, excess hair on face or body)
- Symptoms of endometriosis (pelvic pain, irregular bleeding)

See also Facts About Combined Oral Contraceptives and Cancer, p. 4.

Facts About Combined Oral Contraceptives

Correcting Misunderstandings (see also Questions and Answers, p. 25)

Combined oral contraceptives:
- Do not build up hormones in a woman’s body. Women do not need a “rest” from taking COCs.
- Must be taken every day, whether or not a woman has sex that day.
- Do not make women infertile after they stop taking COCs.
- Do not cause birth defects or multiple births.
- Do not change women’s sexual behavior.
- Do not collect in the stomach. Instead, the pill dissolves each day.
- Do not disrupt an existing pregnancy.

Known Health Risks

Very rare:
- Blood clot in deep veins of legs or lungs (deep vein thrombosis or pulmonary embolism)
Extremely rare:
- Stroke
- Heart attack
Side Effects, Health Benefits, and Health Risks

Side Effects (see also Managing Any Problems, p. 89)

Most users report some changes in monthly bleeding.!
- Typically these include, with DMPA:
  - First 3 months:
    - Irregular bleeding
    - Prolonged bleeding
  - At one year:
    - No monthly bleeding
    - Infrequent bleeding
    - Irregular bleeding
- NET-EN affects bleeding patterns less than DMPA. NET-EN users have fewer days of bleeding in the first 6 months and are less likely than DMPA users to have no monthly bleeding after one year.

Some users report the following:
- Weight gain (see Question 5, p. 93)
- Headaches
- Dizziness
- Abdominal bloating and discomfort
- Mood changes
- Less sex drive

Other possible physical changes:
- Loss of bone density (see Question 11, p. 95)

Why Some Women Say They Like Progestin-Only Injectables

- Requires action only every 2 or 3 months. No daily pill-taking.
- Do not interfere with sex
- Are private: No one else can tell that a woman is using contraception
- Stop monthly bleeding (for many women)
- May help women to gain weight

! For definitions of bleeding patterns, see “vaginal bleeding,” p. 407.
Providing Vasectomy

When to Perform the Procedure

• Any time a man requests it (if there is no medical reason to delay).

Ensuring Informed Choice

**IMPORTANT:** A friendly counselor who listens to a man’s concerns, answers his questions, and gives adequate, clear and practical information about the procedure—especially its permanence—will help a man make an informed choice and be a successful and satisfied user, without later regret (see Female Sterilization, Because Sterilization Is Permanent, p. 220). Involving his partner in counseling can be helpful but is not necessary or required.

The 7 Points of Informed Consent

Counseling must cover all 7 points of informed consent. In some programs the client and the counselor sign an informed consent form. To give informed consent to vasectomy, the client must understand the following points:

1. Temporary contraceptives also are available to the client.
2. Voluntary vasectomy is a surgical procedure.
3. There are certain risks of the procedure as well as benefits. (Both risks and benefits must be explained in a way that the client can understand.)
4. If successful, the procedure will prevent the client from ever having any more children.
5. The procedure is considered permanent and probably cannot be reversed.
6. The client can decide against the procedure at any time before it takes place (without losing rights to other medical, health, or other services or benefits).
7. The procedure does not protect against sexually transmitted infections, including HIV.

Vasectomy Techniques

**Reaching the Vas: No-Scalpel Vasectomy**

No-scalpel vasectomy is the recommended technique for reaching each of the 2 tubes in the scrotum (vas deferens) that carries sperm to the penis. It is becoming the standard around the world.

Differences from conventional procedure using incisions:

• Uses one small puncture instead of 1 or 2 incisions in the scrotum.
• No stitches required to close the skin.
• Special anesthesia technique needs only one needle puncture instead of 2 or more.

Advantages:

• Less pain and bruising and quicker recovery.
• Fewer infections and less collection of blood in the tissue (hematoma).
• Total time for the vasectomy has been shorter when skilled providers use the no-scalpel approach.

Both no-scalpel and conventional incision procedures are quick, safe, and effective.

**Blocking the Vas**

For most vasectomies ligation and excision is used. This entails cutting and removing a short piece of each tube and then tying both remaining cut ends of the vas. This procedure has a low failure rate. Applying heat or electricity to the ends of each vas (coagulation) has an even lower failure rate than ligation and excision. The chances that vasectomy will fail can be reduced further by enclosing a cut end of the vas, after the ends have been tied or cauterized, in the thin layer of tissue that surrounds the vas (fascial interposition). If training and equipment are available, cauter and/or fascial interposition are recommended. Blocking the vas with clips is not recommended because of higher pregnancy rates.
New Problems That May Require Switching Methods

May or may not be due to the method.

- Migraine headaches (see Identifying Migraine Headaches and Aura, p. 436)
  - If she has migraine headaches without aura, she can continue to use the method if she wishes.
  - If she has migraine aura, do not give the injection. Help her choose a method without hormones.

- Unexplained vaginal bleeding (that suggests a medical condition not related to the method)
  - Refer or evaluate by history and pelvic examination. Diagnose and treat as appropriate.

- If no cause of bleeding can be found, consider stopping progestin-only injectables to make diagnosis easier. Provide another method of her choice to use until the condition is evaluated and treated (not implants or a copper-bearing or LNG-IUD).

- If bleeding is caused by sexually transmitted infection or pelvic inflammatory disease, she can continue using progestin-only injectables during treatment.

- Certain serious health conditions (suspected blocked or narrowed arteries, serious liver disease, severe high blood pressure, blood clots in deep veins of legs or lungs, stroke, breast cancer, or damage to arteries, vision, kidneys, or nervous system caused by diabetes). See Signs and Symptoms of Serious Health Conditions, p. 384.
  - Do not give next injection.
  - Give her a backup method to use until the condition is evaluated.
  - Refer for diagnosis and care if not already under care.

- Suspected pregnancy
  - Assess for pregnancy.
  - Stop injections if pregnancy is confirmed.
  - There are no known risks to a fetus conceived while a woman is using injectables (see Question 12, p. 95) or to a woman who receives an injection while pregnant.

Questions and Answers About Progestin-Only Injectables

1. Can women who could get sexually transmitted infections (STIs) use progestin-only injectables?

   Yes. Women at risk for STIs can use progestin-only injectables. The few studies available have found that women using DMPA were more likely to acquire chlamydia than women not using hormonal contraception. The reason for this difference is not known. There are some studies available on use of NET-EN and STIs. Like anyone else at risk for STIs, a user of progestin-only injectables who may be at risk for STIs should be advised to use condoms correctly every time she has sex. Consistent and correct condom use will reduce her risk of becoming infected with an STI.

2. Can women at high risk for HIV use progestin-only injectables?

   Yes. Women at high risk of HIV infection can use any contraceptive method, including progestin-only injectables, except spermicide or diaphragm with spermicide (see Spermicides and Diaphragms, p. 271).

   In late 2016 a WHO assessment observed that some research finds that women who are at high risk of HIV infection and use a progestin-only injectable are slightly more likely to get HIV. It is not clear why studies find this. The injectable may or may not be responsible for increasing a woman's chances of becoming infected if exposed to HIV.

   An expert group convened by WHO concluded, "Women should not be denied the use of progestogen-only injectables because of concerns about the possible increased risk" of HIV infection. WHO classified progestin-only injectables, such as DMPA (including Sayana Press) and NET EN, as Medical Eligibility Criteria (MEC) category 2 for high risk of HIV. This classification means that women at high risk of HIV can generally use the method.

   WHO advises that, in countries and populations where HIV is common, providers should clearly inform women interested in progestin-only injectables about these research findings and their uncertainty, as well as how to protect themselves from HIV, so that each woman can make a fully informed choice (see Considering Progestin-Only Injectables Where HIV Risk Is High, p. 438, for counseling tips). In keeping with the MEC 2 classification, women
Welcome to the TRP!

This website offers curriculum components and tools for trainers to design, implement, and evaluate family planning and reproductive health (FP/RH) training.

All materials can be downloaded for free, and you may adapt or translate them for your own work. If you do use or adapt these materials, please let us know!

Featured Module: Benefits of Family Planning

This module is designed to provide a basic definition of family planning and discuss how it can help improve the lives of women, children, families, and communities. © 2012

Akintunde Akinleye/NURHI, Courtesy of Photoshare
A Training Resource Package for Family Planning

- A comprehensive set of materials designed to support training in family planning and reproductive health.

- A web-based collection of the curricular components and tools needed to design, implement and evaluate training.

- Can be used by facilitators and curriculum developers to implement high quality training and education.

- The materials are appropriate for pre-service and in service training and applicable in both the public and private sectors.

- Incorporates up-to-date technical content and proven training methodologies.

- Content can be customized to meet needs of specific training audiences.

- Can be used by trainers with different levels of training experience – guidance is provided (facilitator’s guide).
The Training Resource Package for Family Planning

Module: Combined Oral Contraceptives (COCs)

Illustrative Module Schedule

Facilitator's Guide
- Includes:
  - Key features of the TRP
  - Overview of the module design
  - Description of module materials
  - How to use the TRP materials
  - Objectives
  - Evaluating participants
  - Description of clinical procedure skills training
  - How to conduct roleplay
  - Case studies
  - Pre- and post-test answer sheets
  - Clinical training skills checklists
  - How to use exercises and games

PPT Slides
- Basic Slide Set (for all providers including mid-level providers and CHWs)
- Selected Advanced Slide Set (for advanced learners or pre-service)
- Optional/Additional Content (i.e., clinical procedure)

Handouts
- Relevant sections of Family Planning: A Global Handbook for Providers

Evaluation Tools
- Pre- and post-tests
- Competency based skills checklists
- Job aids
- Case studies
- Course evaluations
- Role plays
- Review exercises and games

References
- Includes:
  - The Selected Practice Recommendations for Contraceptive Use (2nd edition, 2005 and 2008 Update)
  - The Decision Making Tool for Family Planning Clients and Providers
  - Additional cited research articles

Module Session Plan

Combined Oral Contraceptives (COCs): Session Plan

Notes to Facilitator:
The slides and session plan provide presentations support for conveying technical information and for conducting the interactive learning activities.

To use this presentation most effectively, please:
- Read the COCs Facilitator’s Guide, at the Using the Training Resources for guidance on selecting and adapting TRF materials for the learning audience;
- Next read this session plan, which includes detailed learning objectives and describes how to use this presentation and other materials to prepare for and conduct the learning activities.

Training Process

Session I: Characteristics of COCs

Session II Objective: Describe the characteristics of COCs in a manner that can be understood.

Welcome and Introduction (15 min.)
- Great participants and introduce yourself.

Objectives
Discussion (5 min.)
- The session is designed to address the COC-related objectives listed in the Facilitator’s Guide and Slide 2.

Review objectives with participants.
- Explain that the learning objectives will be assessed through knowledge assessments, role plays, and the use of skills checklists.
- Solicit input about whether the planned objectives match participants’ expectations of the training.

Resources

Session II: Who Can and Cannot Use COCs

Session II Objective: Demonstrate how to screen clients for medical eligibility for COC use.

COCs Are Safe for Nearly All Women
Lecturette (30 min.)
- Use slides to show women who can safely use COCs:
  - Nearly all women can use COCs safely and effectively.
  - More health conditions do not affect safe and effective use of COCs and only a few conditions or situations may affect a woman’s eligibility to use COCs.
  - The WHO medical eligibility criteria were developed to reassure providers about conditions that do not interfere with safe use of contraceptives and highlight all the conditions that affect a woman’s eligibility to use any given contraceptive method.

Who Can and Cannot Use the Pill
Lecturette (15 min.)
- Explain that most women can safely use the pill as mentioned in the previous slide. Use slides to show who should not use COCs.

Medical Eligibility Criteria Brainstorming (10 min.)
- This activity has two purposes:
  1. To give participants an opportunity to share what they know about the eligibility criteria used in their national family planning guidelines or the WHO medical eligibility criteria (WHO MEC) so that the facilitator can determine whether the participants understand the criteria and how they are used or whether they need additional background information before proceeding.
  2. To introduce job aids that help participants understand eligibility criteria (and that may also be used in their work), such as the WHO Medical Eligibility Criteria Wheel for Contraceptive Use, or the Quick Reference Chart for the WHO Medical Eligibility Criteria for Contraceptive Use.

Brainstorming instructions:
- Use slide 7 to introduce the concept of medical eligibility.

Warning Signs of Rare COC Complications
Lecturette (5 min.)
- Use slides to present the following:
  - On very rare occasions, women who use COCs can develop serious complications, usually due to thrombosis or thrombembolism—a blood clot that may form in the

Facilitators’ Guide

Appendix A: Adult Learning

Adult Learning
A noted education, Dr. Malcolm Knowles, devised a theory of adult learning. Before Dr. Knowles published his theory, most educators assumed that adult learning was just as children did and that the teacher/side was to speak and the learner/side just to learn. The teacher was to take full responsibility for the teaching-learning process. When all the of the decisions about what should be learned, how it should be learned was partly a result of the teacher’s knowledge and experience. In the 1960s, Dr. Knowles and others theorized that adults learned differently and made the following assumptions that characterized adults as learners:

Adults as Learners
1. Adults have a need to know why they should learn something.
2. Adults are motivated to learn when they are convinced that learning the new knowledge, attitude, or skill is important. Learning is a meaningful experience for adults if they can understand why they ‘‘need to know’’. 
3. Adults have a deep need to self-direct. “The psychological definition of an ‘adult’ is one who has achieved a self-concept of being in charge of his or her own life, of being responsible for making his or her own decisions, and living with the consequences.” Adults have a strong need to take responsibility for their own lives, including deciding what they want to learn. Dr. Knowles speculates that when adults are trained as children, they withdraw from the learning situation. However, self-directed learning doesn’t necessarily mean learning without help. Adults often need help in making the transition from being themselves as dependent learners to becoming self-directed learners. Learners are responsible for the plan or approach, but not for the training; the trainer involves the participant.
4. Adults have a greater volume and different quality of experience than youth.

The longer we live, the more experiences we have. This affects learning in several ways. Adults bring to the learning experience a wealth of experience which can be used to enrich their learning and that of other participants.

Adults have a broader base of experience to which to attach new ideas and skills and give them color meaning. Tying learning activities to past experiences can make them more meaningful and will help participants remember them better.

Adult learners come together as a group having had a wide range of experiences. They will have a wide range of differences as background, interests, abilities, and learning styles. Because of these differences, adult learning must be more individual and more varied. A true teacher will find out what the issues already know and build on these experiences.

There is a potential negative effect of greater experiences: “It’s hard for people to develop habits of thought and learning to make presuppositions to be less open to new ideas.” This potentially negative effect must be taken into account in planning learning experiences. Techniques must be developed to try to counter this tendency.
How to Use the Pill

Take one pill each day
If you miss 1 or 2 active pills in a row or start a pack 1 or 2 days late:
- Always take a pill as soon as you remember
- Continue to take one pill every day
- No need for additional protection
If you miss 3 or more active pills in a row or start a pack 3 or more days late:
- Take a pill as soon as possible, continue to take 1 pill each day, and use condoms or avoid sex
- For the next 7 days
- If you miss these pills in week 3, also skip inactive pills and start a new pack.

**With 21-pill packs, skip the pill-free interval and start the next pack immediately.**

Combined Oral Contraceptives (COCs)—Clinicians

Role Play Scenario 1—Adolescent client is interested in and eligible for COCs

COCs Scenario 1—Client Information Sheet

Client Description
- You are a 17-year-old female who has been counseled about the benefits of using family planning by a nurse at the antenatal clinic.
- You were pregnant but miscarried two months ago. You read the pamphlet on family planning method options that was given to you by the provider at the clinic and have made a decision about which method you believe best suits your needs.

Offer this information only when the provider asks relevant questions:
- You have had a steady boyfriend for about six months.
- Your boyfriend was on antibiotics recently after he went to see a doctor at the STD clinic.
- You do not use condoms.
- Your last period started five days ago and were very regular each month prior to the miscarriage.
- You feel healthy and have no health problems.
- You would like to have a child someday, but your boyfriend says he is not ready; so you have chosen to use COCs because you believe that COCs would best suit your needs.

COCs Scenario 1—Observer Notes

Make notes of whether the provider:
- Asks about the client's menstruation,irth plans.
- Ensures that the client reads the information described in the pamphlet and has made an informed decision.
- Determines the client's next screening checklist.
- Provides COCs, instructs if pills are missed, and asks.
- Encourages her to be tested.
- Explains the benefit of use counseling to support care.
- Discusses benefits of health counseling it is best to get used months after miscarriage.

Methods for which the client is eligible:
- COCs
- DMPA or NET-EN
- Implants
- Male or female condoms
- Standard Days Method

Key Points for Providers and Clients

- Take one pill every day. For greatest effectiveness a woman must take pills daily and start each new pack on time.
- Bleeding changes are common but not harmful. Typically, irregular bleeding for the first few months and then lighter and more regular bleeding.
- Take any missed pill as soon as possible. Missing pills risks pregnancy and may make some side effects worse.
- Can be given to women at any time to start later. If pregnancy cannot be ruled out, a provider can give her pills to take later when her monthly bleeding begins.

What Are Combined Oral Contraceptives?

- Pills that contain low doses of 2 hormones—a progestin and an estrogen—like the natural hormones progesterone and estrogen in a woman's body.
- Combined oral contraceptives (COCs) are also called "the Pill," low-dose combined pills, OCPs, and OCs.
- Work primarily by preventing the release of eggs from the ovaries (ovulation).

How Effective?

Effectiveness depends on the user: Risk of pregnancy is greatest when a woman starts a new pill pack 3 or more days late, or misses 3 or more pills near the beginning or end of a pill pack.
EVALUATION TOOLS

Combined Oral Contraceptives (COCs):
Competency-Based Training (CBT) Skills Assessment Checklist for COCs

Date of Assessment: ____________________  Dates of Training: ____________________

Place of Assessment: Facility: ____________________ Classroom: ____________________

Name of Facility: ____________________ Type of Facility: □ MOH/GoV't □ NGO □ Other

Level of Facility: □ Primary □ Secondary □ Tertiary

Name of the Service Provider: ____________________

Name of the Assessor:

This assessment tool contains the detailed steps that a service provider should follow in counseling and providing client instructions for COCs. The checklist may be used during the clinical phase of training to determine whether the trainee has reached a level of competency in performing the skills. It may also be used by the trainee or supervisor when following up on monitoring the trainee. The trainee should always receive a copy of the assessment checklist so that she may know what is expected of her/him.

Instructions for the Assessor:

1. Always explain to the client what you are doing before beginning the assessment. Ask for the client's permission to observe.

2. Begin the assessment when the trainee greets the client.

3. Use the following rating scale:
   1. Needs Improvement: Step or task not performed correctly or out of sequence (if necessary) or omitted
   2. Competently Performed: Step or task performed correctly in proper sequence (if necessary) but participant does not progress from step to step efficiently
   3. Proficiently Performed: Step or task performed efficiently and precisely performed in the proper sequence (if necessary)

Not observed: Step, task, or skill not performed by the trainee during evaluation by the trainer.

4. Continue assessing the trainee throughout the time she is with the client, using the rating scale.

Last revised: 11 June 2012  Page 1

The Combined Oral Contraceptives (COCs): Post-Test

Participant Name: ____________________

Instructions: Circle the letter(s) for all that apply. (Some questions may have more than one correct answer.) Follow specific directions for each section. There is a maximum of 100 points per section. Use whatever passing score is usually used in your country, but 80% is recommended.

1. Which of the following is correct about the hormonal mechanism of COCs?
   a. COCs contain the synthetic hormone progestin and estrogen.
   b. COCs contain natural estrogen and synthetic progestin.
   c. All formulations of COCs contain the hormones ethinyl estradiol.
   d. COCs contain more than two types of synthetic hormones.

2. COCs prevent pregnancy by:
   a. Damaging sperm.
   b. Causing cervical mucus to become thicker.
   c. Preventing a fertilized egg from embedding in the uterine lining.
   d. Suppressing ovulation.

3. The mechanism of action of COCs includes:
   a. Destroying the ovum.
   b. Suppressing hormones responsible for ovulation.
   c. Hampering sperm transport by thickening cervical mucus.
   d. Thinning cervical mucus to block sperm.

4. Consistent and correct use (perfect use) of COCs among 100 women:
   a. 0 pregnancies per 100 women in the first year of use.
   b. 2 pregnancies per 100 women in the first year of use.
   c. 4-6 pregnancies per 100 women in the first year of use.
   d. 8-9 pregnancies per 100 women in the first year of use.

5. Major advantages of COCs include the facts that:
   a. It is highly effective if taken correctly.
   b. It protects against HIV/AIDS.
   c. It protects against ovarian and endometrial cancer.
   d. It decreases risk of ovarian cysts.
   e. It protects against breast cancer.

Page 1 of 6

The Combined Oral Contraceptives (COCs):
Course Evaluation

Instructions: Rate each of the following statements as to whether or not you agree with them, using the following key:

1. Strongly disagree.
2. Somewhat disagree.
3. Neither agree nor disagree.
4. Somewhat agree.
5. Strongly agree.

Overview:
   a. The objectives of the module were clearly defined.
   b. The material was new to me.
   c. The trainer understood the material being presented.
   d. The time spent on this module was sufficient.
   e. Time for discussion and questions was sufficient.
   f. The material in this module has provided me with sufficient information to conclude the safety and effectiveness of COCs.
   g. The module has offered me the skills to provide COC services, including counseling, appropriate client screening and selection, and management and follow-up of clients.
   h. The pre-post-test accurately assessed my course learning.

Meeting Conditions:
   a. The training was held on a convenient day and time.
   b. Necessary supplies were available.

Training Methods and Materials:
   a. The trainers' presentations were clear and organized.
   b. I learned practical skills in the role plays and case studies.
   c. Class discussion was helpful.
   d. The trainers encouraged my questions and input.

Course Length:
   a. The length of the course was (circle your answer): Too long  Too short  Just right
